

Camping World Agentic AI Blueprint — Connecting the Artifact to the Role

Principal Business Architect (Architecture Governance) — Candidacy Brief

Prepared by	Jeffrey Wallk
For	Camping World / Good Sam — Enterprise Architecture
Role	Principal Business Architect (Architecture Governance)
Engagement	C2C · Chicagoland-based · travel to Lincolnshire, IL
Companion artifacts	Agentic AI Solution Architecture Blueprint (26 pp) and Companion Deck (30 slides)
Document purpose	Connect the blueprint I produced to the responsibilities of the role and define the impact path

This brief uses highlighted text to call out the specific lines of impact in the narrative.

1. Executive Narrative

The blueprint and deck I'm sharing were not built as a generic point of view. They were built specifically for Camping World — using the Hub-and-Spoke business model, the Good Sam recurring-revenue engine, the in-house Extended Service Plan CRM bet, the Informatica Customer 360 consolidation of ~29M records, and the publicly stated 2025–2026 strategic pivot from retailer to lifestyle ecosystem — because **I want the conversation about this role to start where the work actually starts: with the enterprise's current reality and where it is trying to go.**

1.1 What the deck is

The deliverable is a paired artifact — a 26-page technical blueprint and a 30-slide companion deck — that defines a target-state solution architecture for the agentic AI capability layer at Camping World, the component design that delivers it, and the time-phased capability roadmap that progressively builds the landscape from 2026 Q3 through 2028 Q4.

It is deliberately structured the way Enterprise Architecture artifacts should be structured for a governance audience. **Business context first, then ten non-negotiable architecture principles, then a seven-layer reference architecture** (Experience → Orchestration → AI/ML Services → Data Foundation → Integration → Systems of Record, with Security, Responsible AI, AgentOps, and FinOps running across all of them). **Then, domain-by-domain component design for the five agentic domains where the value lives:** Predictive Service, Customer 360 & Personalization, Conversational AI, Inventory Metrology, and Back-Office Automation. **Then a canonical agent anatomy with a declarative agent contract that travels with each agent** (risk class, SLO, cost budget, human-in-the-loop policy, rollback window). Then, data architecture, integration architecture, security, and Responsible AI, the quarter-by-quarter roadmap, KPIs tiered into business outcome/capability/platform health, a risk register, and a component catalog of 18 named agents and 12 platform components.

In short, **the kind of document that a real EA program can govern against, defend at an ARB, and trace back to capability maps and portfolio decisions.**

1.2 How these line up with the role

The role you've defined is not a model-building role. It is an Architecture Governance role — and **the artifact I have built is exactly the kind of input the governance function should receive, normalize, and operationalize.** The sections that follow walk through each responsibility area and the way I would carry this forward in the seat.

Architecture Governance Leadership

The blueprint already names the artifacts the ARB, SGC, TSP, and TSC will need to act on: the agent contracts, the risk-class taxonomy, the Run Store and Eval Harness gates, the layered reference architecture, the cross-cutting RAI controls. In role, **I would convert these from a one-time deliverable into the standing operating model: ARB review templates anchored on the agent contract; an SGC cadence that gates promotion of any agent from Pilot to GA against the eval harness; a TDR framework that captures and enforces the architectural choices already documented in Section 4** (multi-vendor LLM router, MCP tool bus,

anti-corruption layer over the DMS, Informatica as the identity backbone). **Every section of this blueprint is in effect a draft TDR pack waiting to be ratified.**

Business Architecture and Process Modeling

The blueprint's domain decomposition — Predictive Service, Customer 360 / Personalization, Conversational AI, Inventory Metrology, Back-Office Automation — is the L1 capability map. Within each domain, the agent flows (Section 5 and the slide-13 component diagram) are L2 process models. The agent contracts and tool catalogs are L3, and the underlying tool and API definitions are L4. **In this role, I would take this draft capability and process model into the formal repository, reconcile it with the enterprise taxonomy already in use, and stand up the business-to-technology capability mapping that drives investment decisions.** The artifact gives the EA team a head start on the operating model that the role is asked to maintain.

Application and Technology Portfolio Management (APM / TPM)

The component catalog at the back of the blueprint and on Slide 29 is, structurally, **an APM seed dataset — 18 agents and 12 platform components, each with an owner, a domain, a risk class, a lifecycle phase (P1–P5), and a dependency on systems of record.** The Layer-6 view (DMS, ERP, ESP-CRM, POS, WMS, HRIS, LMS, Membership Platform) is the TPM substrate it has to integrate against. In role, I would extend this into the formal APM/TPM tool of record, populate lifecycle states and obsolescence risk, drive rationalization conversations — ***the strangler pattern called out for the DMS is a TPM thesis*** — and produce the dashboards and heatmaps that show portfolio health and modernization opportunity to executive leadership.

Cross-Functional Alignment and Facilitation

The blueprint was deliberately written for the CTO Office but explicitly traces every capability to a business outcome (Section 10.7 — the Capability-to-Outcome trace; Slide 21 — the roadmap-at-a-glance with ESP attach, ROAS, lead-to-close, aged inventory, and SG&A on the bottom rail). **That same translation discipline is what governance forums need: business sponsors need to see outcomes, engineers need to see contracts, audit needs to see controls, finance needs to see TCO and routing economics.** I would facilitate ARB and CoP sessions using the same translation pattern, with this artifact serving as a worked example of how to present cross-domain initiatives so every audience can engage.

Risk, Compliance, and Audit Readiness

Section 9 (security, privacy, Responsible AI), Section 12 (risk register), the L0 cross-cutting layer, and the agent contract's HITL and rollback fields together form an audit-ready frame. In role, **I would convert this from documentation into governed records: TDRs for each architectural choice, audit trails from the Run Store, evidence packs for SOX-relevant back-office automation, and a Responsible AI Council operating cadence with documented decisions.** The role calls for audit-ready governance; the blueprint is structured to produce it as a byproduct of doing the work.

Reporting, Metrics, and Executive Insight

The tiered KPI framework (Section 11, Slide 27) is the basis for the scorecards and heatmaps the role is responsible for. **Tier-1 business outcomes go to the executive scorecard. Tier-2 capability metrics go to the domain leads. Tier-3 platform health — eval pass rate, p95 latency, dollars-per-call, drift — go to the platform engineering scorecard.** The value-pacing chart (\$10–15M → \$45–60M → \$120–160M cumulative run-rate) is the narrative the EA program should carry into TSC and finance conversations to defend continued investment in the substrate work that does not pay back in-quarter.

Knowledge Management and Architecture Enablement

The artifact itself is a template. The agent-contract YAML, the component catalog format, the layered reference, the principles framing, and the domain decomposition pattern — all of these are reusable across other initiatives at Camping World, not just agentic AI. In this role, I would put this into the centralized repository, set the documentation standard for downstream architects, and run the office hours, workshops, and CoP sessions that get the federated architecture community using consistent capability maps and process models.

1.3 On the practical fit

The role is described as a senior individual contributor that requires deep business architecture knowledge, a strong command of governance mechanisms, and the ability to translate architectural insights into clear, actionable business outcomes. **The artifact I am sharing is one piece of evidence that this is the shape of work I do — structured, governance-aware, traceable from principle to component to roadmap to KPI, and written for the audience that has to make decisions about it.**

On logistics: I am available immediately at the rate cited, I am Chicagoland-based, and travel to Lincolnshire is straightforward. I would want to spend my first two weeks in-seat understanding the existing ARB / SGC / TSP / TSC operating model, the current state of the APM and TPM repositories, the live capability map, and the open architectural risk register — and then propose where the existing operating model needs reinforcement versus where this kind of blueprint format can accelerate decision-making for initiatives already in flight. I would treat the Camping World-specific blueprint not as a deliverable I am selling, but as a worked artifact that demonstrates how I would structure the EA program's outputs from day one.

The strategic thesis I argued in the deck — that Camping World does not need more AI, it needs a coherent agentic capability platform that converts the golden record, the telemetry, and the Good Sam subscription base into a self-improving lifecycle engine — only works if the governance function is mature enough to gate the right work in and the wrong work out. **That is the seat you are hiring for, and that is the seat I am interested in filling.**

2. Areas of Impact in the Blueprint

This table maps each major section of the blueprint to the specific role responsibility it directly enables, and to the day-one contribution I would bring as Principal Business Architect (Architecture Governance). Read it as: artifact → governance function → impact.

Blueprint Section	Role Responsibility Enables	Day-One Contribution
§3 Architecture Principles (10 non-negotiables)	Architecture Governance Leadership · ARB / SGC standards	Convert the 10 principles into ratified standards; bind every TDR to a principle ID; publish the exception process.
§4 Layered Reference Architecture (L0–L6)	EA standards · technology strategy · TPM substrate	Use the 7-layer model as the canonical EA reference; tag every TPM record to its layer; align CoP/CoE charters to layers.
§5 Domain Component Design (5 domains)	Business Architecture · L1–L4 process and capability modeling	Promote the 5-domain decomposition into the enterprise capability map; populate L0–L4 process models per domain.
§6 Canonical Agent Anatomy + Agent Contract	Software Governance Committee (SGC) · TDR framework	Adopt the agent contract as the SGC promotion gate (Pilot → GA); store contracts as governed artifacts in the EA repository.
§7 Data Architecture (C360 + Vehicle 360)	Business-to-technology capability mapping · data governance liaison	Anchor C360 and Vehicle 360 as the two enterprise golden-record capabilities; ensure every agent records identity-resolution dependency.
§8 Integration Architecture (3 planes)	TPM · integration governance · standards adoption	Codify Sync API, Async Event, and MCP Tool Bus as the three governed integration patterns; deprecate point-to-point exceptions.
§9 Security, Privacy & Responsible AI	Risk, Compliance, Audit Readiness · RAI Council	Stand up the RAI Council cadence; produce audit evidence packs from Run Store; map threats in §9 to the enterprise risk register.
§10 Progressive Roadmap (P1–P5, 2026–2028)	Portfolio sequencing · investment prioritization	Translate phases into APM / TPM investment buckets; align quarterly Roadmap Reviews to phase exit criteria.
§10.7 Capability-to-Outcome Trace	Reporting · Executive Insight · TSC narrative	Adopt the trace as the standing format for executive scorecards; bind capability investment to measurable outcomes.
§11 KPI Tiers (Outcome / Capability / Platform)	Dashboards, scorecards, heatmaps	Stand up three-tier scorecards across all domain agents; gate funding releases on Tier-2 + Tier-3 health.
§12 Risk Register (10 risks with mitigations)	Architectural risk tracking · audit readiness	Onboard the register into the EA risk-tracking tool; assign owners; review at monthly ARB cadence.
§13 Component Catalog (18 agents + 12 platform components)	Application Portfolio Management (APM)	Use as seed dataset for APM tool of record; capture lifecycle, owner, risk class, dependencies, phase.
Slide 29 Component Catalog (visual)	Knowledge Management · stakeholder communication	Reuse as the standing visual format for portfolio readouts at ARB and TSP.

2.1 Five Highest-Leverage Moves in the First 90 Days

Move	Tied To	Outcome
Ratify the 10 architecture principles via ARB	§3 Principles	Every TDR after Day 30 references a principal ID; exceptions are tracked.
Stand up the TDR framework with §4 layered reference as the canonical map	§4 + Role TDR responsibility	Single backlog of architectural decisions; ARB cadence accelerated.
Seed APM with the 18-agent + 12-component catalog	§13 Catalog · APM role	Portfolio baseline established; lifecycle, owner, risk visible to leadership.
Onboard the §12 risk register; assign owners; bind to ARB review cadence	§12 + Risk role	Architectural risks tracked alongside enterprise risks; audit-ready.
Publish the §11 three-tier KPI scorecard for the first two production agents	§11 KPI tiers · Reporting role	Executive narrative aligned to platform health, not just dollar savings.

3. Acronym Glossary

Curated list of acronyms used across the blueprint, the companion deck, and this narrative. Grouped by domain for quick reference.

3.1 Enterprise Architecture & Governance

Acronym	Expansion / Meaning
APM	Application Portfolio Management — lifecycle and rationalization of the application estate.
ARB	Architecture Review Board — governance body that reviews and approves architectural decisions.
C4E	Center for Enablement — federated team that scales practice adoption across delivery teams.
CoE	Center of Excellence — concentrated expertise body for a discipline (e.g., data, AI, security).
CoP	Community of Practice — voluntary federated community sharing a practice domain.
EA	Enterprise Architecture — the discipline aligning business strategy, capabilities, and technology.
SGC	Software Governance Committee — governance body for software delivery standards and promotion gates.
TDR	Technology Decision Record — durable record of an architectural decision, its drivers, and its consequences.
TPM	Technology Portfolio Management — lifecycle of platforms, infrastructure, and supporting technologies.
TSC	Technology Strategy Council — executive forum that sets technology strategy direction.
TSP	Technology Strategy Panel — working forum that develops technology strategy positions for the TSC.
ADR	Architecture Decision Record — synonymous with or precursor to a TDR in many organizations.
COBIT	Control Objectives for Information and Related Technologies — governance and management framework.
ITIL	Information Technology Infrastructure Library — IT service management framework.
SAFe	Scaled Agile Framework — agile-at-scale framework.
PMO	Project Management Office — central program governance and reporting function.

3.2 Agentic AI & Platform

Acronym	Expansion / Meaning
AI	Artificial Intelligence.
LLM	Large Language Model — foundation model trained on broad text corpora.
ML	Machine Learning.
MLOps	Machine Learning Operations — practices for deploying and operating ML models in production.
AgentOps	Operational discipline of monitoring, evaluating, and managing AI agents at scale.
MCP	Model Context Protocol — open standard for exposing tools to AI agents.
RAG	Retrieval-Augmented Generation — pattern that combines retrieval with LLM generation.
HITL	Human-in-the-Loop — human checkpoint within an automated workflow.
RAI	Responsible AI — set of practices ensuring fair, safe, and accountable AI.
SLO	Service-Level Objective — measurable target (latency, accuracy) an agent commits to.
SLA	Service-Level Agreement — contracted commitment with consequences for breach.
RPV	Revenue Per Visitor — digital marketing performance metric.
KPI	Key Performance Indicator.
MTTR	Mean Time To Resolve (or Repair).
p95	95th percentile (commonly applied to latency distributions).
SDK	Software Development Kit.
ASR	Automatic Speech Recognition — speech-to-text.

TTS	Text-to-Speech.
STT	Speech-to-Text — an alternate term for ASR.
CV	Computer Vision.
RAI Council	Cross-functional body that reviews and approves AI agents before production.

3.3 Data, Identity & Integration

Acronym	Expansion / Meaning
C360	Customer 360 — consolidated golden record across all customer-bearing systems.
IDMC	Informatica Intelligent Data Management Cloud — Informatica's cloud data management platform.
CDC	Change Data Capture — pattern that streams data changes out of operational stores.
CDP	Customer Data Platform.
API	Application Programming Interface.
iPaaS	Integration Platform as a Service.
IAM	Identity and Access Management.
CIAM	Customer Identity and Access Management.
WIAM	Workforce Identity and Access Management.
SCIM	System for Cross-domain Identity Management — provisioning standard.
MFA	Multi-Factor Authentication.
mTLS	Mutual Transport Layer Security — bilateral certificate-based authentication.
OAuth2	Open Authorization v2 — token-based authorization framework.
RBAC	Role-Based Access Control.
JIT	Just-In-Time — privileges granted only at the moment of need.
PII	Personally Identifiable Information.
DQ	Data Quality.
SAST	Static Application Security Testing.
DAST	Dynamic Application Security Testing.
SBOM	Software Bill of Materials.
VIN	Vehicle Identification Number — unit-level identifier for an RV.

3.4 Camping World Business & Systems

Acronym	Expansion / Meaning
ESP	Extended Service Plan — Good Sam's recurring-revenue service contract product.
DMS	Dealer Management System — third-party system (e.g., Reynolds & Reynolds, CDK) that runs dealership operations.
CRM	Customer Relationship Management — system of record for customer interactions.
ESP-CRM	Camping World's in-house CRM is purpose-built for the Extended Service Plan business.
ERP	Enterprise Resource Planning — financial and operational system of record (e.g., NetSuite, JDE).
POS	Point of Sale.
WMS	Warehouse Management System.
HRIS	Human Resources Information System (e.g., Workday).
LMS	Learning Management System — for technician certifications and training.
RO	Repair Order — work-order record in the service domain.
TSB	Technical Service Bulletin — OEM service guidance for known issues.

NHTSA	National Highway Traffic Safety Administration — US vehicle safety regulator.
OEM	Original Equipment Manufacturer — RV brands like Forest River, Thor, Winnebago.
F&I	Finance and Insurance — dealership process for arranging financing and add-on coverages.
GL	General Ledger.
JE	Journal Entry.
AP	Accounts Payable.
HR	Human Resources.
SG&A	Selling, General & Administrative expenses.
SOX	Sarbanes-Oxley Act — US financial controls regulation.
CCPA	California Consumer Privacy Act.
CPRA	California Privacy Rights Act — successor to CCPA.
SKU	Stock Keeping Unit.
GM	General Manager — regional dealership leadership.
ROAS	Return on Ad Spend — marketing performance metric.
LTV	Customer Lifetime Value.
CX	Customer Experience.
YoY	Year-over-Year.
TCO	Total Cost of Ownership.

3.5 Cloud, DevOps & Tooling

Acronym	Expansion / Meaning
AWS	Amazon Web Services.
GCP	Google Cloud Platform.
Azure	Microsoft Azure.
SaaS	Software as a Service.
CI	Continuous Integration.
CI/CD	Continuous Integration and Continuous Delivery / Deployment.
FinOps	Financial Operations for cloud — discipline of managing cloud cost and consumption.
DevSecOps	Development, Security, and Operations integrated practice.
RFx	Generic term for Request for Information / Proposal / Quote / etc.
AJO	Adobe Journey Optimizer — Adobe's lifecycle-marketing orchestration tool.
OCR	Optical Character Recognition.
CTO	Chief Technology Officer.
